Design Decision: The design was kept simple so it is easy for most people to understand and it was designed the way we learned in the lectures. Firstly, all the attributes were listed in an excel file then itscorresponding entities were identified, afterwards relationships and disjoints were discussed and listed finally after listing all bits and pieces it was time to put them together. First each attribute was drawn followed by it being connected it to its entities after all that was done. Relationship, disjoints, etc. were drawn in a neat and organized manner with proper spacing between them to avoid confusion.

Assumptions: In terms of assumptions none were made.
